DOMAIN 7 STUDY MATERIALS QUESTIONS

Question 1

Question: The first step in development of a safety training program must be to:

- a. Identify employees who may need training
- b. Prepare workbooks that are easy to understand
- c. Find instructors who are qualified in the subject of training
- d. Define objectives of the training program

Correct Answer: Select (d)
Explanation: The most important step in development of a safety and health program is to clearly define the goals and objectives of the program.

Question 2

Question: In defining a safety training program, "validity" refers to:

- a. Ensuring that the elements of the training program cover all relevant legal requirements of the tasks.
- b. Ensuring that the program is feasible and covers the areas which reduce risk and liability.
- c. Identification of hazards of each task and the required knowledge and skills for safe performance.
- d. Identification and analysis of each component of the training program to ensure that all covered areas are technically and legally correct.

Correct Answer: Select (c)
Explanation: In defining an effective safety training program, validity refers to identification of the hazards associated with each task and the required knowledge and skills to perform those tasks in a safe manner.

Question 3

Question: Which of the following statements is true regarding a learning curve?

- a. The level of proficiency gained is inversely proportional with the amount of time devoted to learning.
- b. The level of proficiency gained is directly proportional with the amount of time devoted to learning.
- c. The level of proficiency gained varies exponentially with the amount of time devoted to learning.
- d. The level of proficiency gained is directly proportional with the amount of time devoted to learning but eventually tends to reach a limit.

Correct Answer: Select (d)
Explanation: The learning curve suggests that the level of proficiency gained increases with the time devoted to learning but eventually tends to reach a limit.

Question 4

Question: Which of the following is NOT one of the characteristics of role-playing training technique?

- a. It can be used effectively to find innovative approaches to solving problems.

- b. Members participate to identify problems.
- c. Brain storming is used to find solutions to specific problems.
- d. It is an effective tool for identifying, evaluating, and changing personnel issues.

Correct Answer: Select (a)
Explanation: Statements (b), (c), and (d) are all true in regard to role-playing training technique. This approach is not necessarily used to find innovative approaches to problem solving.

This is an excellent technique for management as well as other employees within an organization to achieve a number of benefits. For example, salespersons within an organization can be trained by having two people act in a sales scenario—one acts as the salesperson and the other as the customer. The trainer and/or trainees have the opportunity to observe the role play and make their comments afterwards.

Question 5

Question: Which of the following statements is NOT true regarding the meeting or conference method of training?

- a. This technique is effective because it allows each member to bring his/her knowledge to the meeting.
- b. The number of people in each meeting must be limited in such a way to allow effective discussions and exchange of ideas.
- c. The ideas and opinions of each member must be recorded and a summary report must be prepared and presented to each group member.
- d. The main reason for success of the meeting method of training is the fact that the group leader can have control of the topics that are being discussed.

Correct Answer: Select (d)
Explanation: Statements (a), (b), and (c) are true in regard to the conference method of training. Statement (d) is not considered to be one of the reasons for the success of this type of training technique.

This method of training takes a problem-solving approach. A group takes on a problem or issue and work together to come up with solutions. Among the disadvantages of this method of training are the difficulties in controlling a group or the group coming up with solutions that might be different from management's, resulting in conflict.

Question 6

Question: Certain personal motives can have a direct positive impact on people's behavior. This in turn can have a positive impact on the outcome of training. Which of the following is considered to be the highest motivation factor?

- a. Promotion
- b. Achievement
- c. Work environment
- d. Company policies

Correct Answer: Select (b)
Explanation: Achievement is considered to be the largest driving force behind motivating individuals to change behavior to enhance training.

Question 7

Question: Which of the following statements is NOT true regarding a cost-benefit analysis for training programs?

- a. The benefits of a training program must exceed its costs.
- b. The cost of a training program can usually be estimated with considerable accuracy.
- c. Improved operating conditions can be a benefit of a training program.
- d. Lowering the indirect average cost of an accident is usually considered a benefit of a training program.

Correct Answer: Select (d)
Explanation: Training programs are usually designed to reduce or eliminate the number of preventable accidents, improve housekeeping and operating conditions, etc. Lowering the average indirect cost of accidents is not considered to be a goal of a successful training program.

Question 8

Question: Which of the following statements is true regarding a performance-based training program?

- a. The focus of the training program is to solve a specific on-the-job problem.
- b. This type of training, in general, can not be measured by analysis of worker's performance.
- c. Feedback from workers during the evaluation of program has minimal effect on the final training.
- d. Feedback from supervisors, in general, does not affect the final training program.

Correct Answer: Select (a)
Explanation: Performance-based training focuses on solving a specific on-the-job problem. Safety training programs in general are more cost-effective when the training focuses on specific performance outcomes, rather than training on a wide range of knowledge and skills that trainees may not be sure how to apply to their jobs.

Question 9

Question: In many training programs, case studies are used for training purposes. Which of the following is the BEST description of case study?

- a. Case study is a method of training in which group participation is not addressed.
- b. Case study is a description of how people or organizations have dealt with a certain situation.
- c. Case studies usually are an ineffective way of dealing with the development of problem-solving techniques.
- d. Case studies are usually about generalizations and do not address specific conclusions.

Correct Answer: Select (b)
Explanation: A case study is a description of how people or organizations have dealt with a certain situation. One of the disadvantages of the case study method of training is that it may not relate to the actual work situation.

The case study method of training encourages trainees not only to apply known concepts to workplace situations but also to develop new concepts and ideologies. The main objective of this method of training is problem identification; the solution to the problem is secondary.

Question 10

Question: In computer-based safety training, LANs can be used to deliver training to many workstations. LAN is an acronym for:

- a. Leave A Network
- b. Language Advanced Network
- c. Local Area Network
- d. Logistics Area Navigation

Correct Answer: Select (c)
Explanation: In computer terminology LAN is an acronym for Local Area Network.

Question 11

Question: Which the following is NOT one of the three domains of learning?

- a. Cognitive
- b. Affective
- c. Interactive
- d. Psychomotor

Correct Answer: Select (c)
Explanation: "Interactive" is not considered to be one of the three domains of learning. The cognitive domain deals with mental skills (knowledge). The affective domain provides enhancement in emotional areas that can affect, for example, attitude. The psychomotor domain of learning deals with the enhancement of physical skills. Therefore, any training program should focus on improving the learners' knowledge, skills, and/or attitudes.

Question 12

Question: Which of the following statements is NOT true in regard to safety training?

- a. Safety training can be effective when the trainees are motivated.
- b. Effective safety training, in general, does not affect employee morale.
- c. The cost of safety training may be easier to hide than the cost of new equipment or facilities.
- d. Safety training has a critical role in an occupational safety program.

Correct Answer: Select (b)
Explanation: Effective safety training can have a very positive effect on employee morale. Studies by the National Institute of Health have concluded that worker participation in the training program has a marked impact on the outcome of the program. These studies concluded that training involving behavioral modeling, a substantial amount of practice, and dialog is generally more effective than other methods of safety and health training. The present findings challenge the current emphasis on more passive computer-based and distance training methods within the public health workforce.

Question 13

Question: One of the elements of developing an effective safety training program is to develop learning activities. All of the following are steps involved in developing learning activities EXCEPT:

- a. Identify the trainees' learning characteristics.
- b. Write course evaluation materials.
- c. Select or develop instructional materials.
- d. Identify training needs.

Correct Answer: Select (d)
Explanation: Identifying training needs is not one the steps involved in developing learning activities.

Question 14

Question: All of the following are considered to be red flags for the need or consideration of a safety training program EXCEPT:

- a. Lack of instructional materials
- b. New employees
- c. Rising insurance rates
- d. New equipment

Correct Answer: Select (a)
Explanation: Lack of instructional materials does not indicate that there is a need for a safety training program.

The first step in the training process is a basic one; to determine whether a problem can be solved by training. Problems that can be addressed effectively by training include those that arise from lack of knowledge of a work process, unfamiliarity with equipment, or incorrect execution of a task. Training is less effective (but still can be used) for problems arising from an employee's lack of motivation or lack of attention to the job. Whatever its purpose, training is most effective when designed in relation to the goals of the employer's total safety and health program.

If the problem is one that can be solved, in whole or in part by training, then the next step is to determine what training is needed. For this, it is necessary to identify what the employee is expected to do and in what ways, if any, the employee's performance is deficient. This information can be obtained by conducting a job analysis that pinpoints what an employee needs to know in order to perform a job.

Once the kind of training that is needed has been determined, it is equally important to determine what kind of training is not needed. Employees should be made aware of all the steps involved in a task or procedure, but training should focus on those steps on which improved performance is needed. This avoids unnecessary training and tailors the training to meet the needs of the employees.

Question 15

Question: Effective safety training programs require clearly stated goals and objectives that are measurable. All of the following are considered to be components of objectives EXCEPT:

- a. Performance
- b. Condition of the work
- c. Developing learning activities
- d. Standard of quality for performance that is described

Correct Answer: Select (c)
Explanation: The "performance" is a statement of what the trainee will do. In order to have an effective safety training program, the condition of the work must be taken into account. Each objective must have a standard of quality for the performance that is described. Developing learning activities is not considered to be one of the components in identifying goals and objectives.

Question 16

Question: In developing safety training programs, "performance" is a statement of what the trainee will do. It must include an action verb that describes a behavior that is observable and measurable. Which of the following is considered to be an action verb that is measurable?

- a. Appreciate
- b. Understand
- c. Know
- d. Select

Correct Answer: Select (d)
Explanation: Verbs such as "appreciate", "understand", and "know" are examples of action verbs that are not measurable and should not be used for describing performance in safety training. On the other hand, verbs such as "select", "manipulate", "discriminate", and "identify" are action verbs that clearly denote specific actions.

Question 17

Question: In developing a "performance" statement for safety training purposes, it is important to ensure that what the trainee is expected to do is observable and measurable. All of the following are examples of measurable performances EXCEPT:

- a. Understand how to respond to a hazardous chemical spill
- b. List the steps that need to be followed in an emergency evacuation
- c. Select the proper tools necessary for heat exchanger maintenance
- d. Fill out a Uniform Hazardous Waste Manifest for shipment of hazardous waste

Correct Answer: Select (a)
Explanation: The verb "understand" does not describe a behavior that is measurable. Examples in statements (b), (c), and (d) all describe behaviors that are clearly measurable and/or observable.

Question 18

Question: Safety training objectives must be based on which of the following?

- a. Course content
- b. Job Hazard Analysis
- c. Trainer's qualifications
- d. Available training tools

Correct Answer: Select (b)
Explanation: Job Hazard Analysis will identify the safety hazards that workers may encounter on the job. Appropriate engineering and administrative controls as well training can be provided to either eliminate or reduce the risk of exposure to hazardous conditions.

Supervisors can use the findings of a job hazard analysis to eliminate and prevent hazards in their workplaces. This is likely to result in fewer worker injuries and illnesses; safer, more effective work methods; reduced workers' compensation costs; and increased worker productivity. The analysis also can be a valuable tool for training new employees in the steps required to perform their jobs safely.

A job hazard analysis can be conducted on many jobs in the workplace. Priority should go to the following types of jobs:

- Jobs with the highest injury or illness rates
- Jobs with the potential to cause severe or disabling injuries or illness, even if there is no history of previous accidents
- Jobs in which one simple human error could lead to a severe accident or injury
- Jobs that are new to your operation or have undergone changes in processes and procedures
- Jobs complex enough to require written instructions

Question 19

Question: There are three steps to ensuring that learning activities succeed in enabling the trainees to master the behaviors listed in the training objectives. Which of the following is the correct order of these steps?

- a. Identify the learning characteristics of the trainees, structure the materials and activities into the training program, and develop or select instructional materials and activities.
- b. Structure the materials and activities into the training program, develop or select instructional materials and activities, and identify the learning characteristics of the trainees.
- c. Identify the learning characteristics of the trainees, develop or select instructional materials and activities, and structure the materials and activities into the training program.
- d. Develop or select instructional materials and activities, identify the learning characteristics of the trainees, and structure the materials and activities into the training program.

Correct Answer: Select (c)
Explanation: The correct order of the steps to be followed is statement (c).

Once you have stated precisely what the objectives for the training program are, then learning activities can be identified and described. Learning activities enable employees to demonstrate that they have acquired the desired skills and knowledge.

To ensure that employees transfer the skills or knowledge from the learning activity to the job, the learning situation should simulate the actual job as closely as possible. Thus, employers may want to arrange the objectives and activities in a sequence that corresponds to the order in which the tasks are to be performed on the job, if a specific process is to be learned.

For instance, if an employee must learn the beginning processes of using a machine, the sequence might be: (1) to check that the power source is connected; (2) to ensure that the safety devices are in place and are operative; (3) to know when and how to throw the switch; and so on.

Question 20

Question: All of the following are considered to be characteristics of the trainee population that may affect learning EXCEPT:

- a. Physical characteristics
- b. Education
- c. Motivation
- d. Societal issues

Correct Answer: Select (d)
Explanation: According to Mager and Beach, the characteristics of the target population that may affect learning are physical characteristics, education, motivation, and interests.

Question 21

Question: Which of the following statements is NOT true in regard to conducting a safety training program?

- a. It is important to keep the trainees mentally active.
- b. The presentation must be tailored to the values and learning styles of the trainees.
- c. Unreasonable fears of occupational hazards must be avoided.
- d. If the content of the course were tailored to the trainees learning needs and learning styles, starting with a pilot program would be considered an inefficient way of conducting training.

Correct Answer: Select (d)
Explanation: Actually, in this situation, the pilot program will hold the trainees' interests. Once a training program has been developed, it is always a good idea to conduct the training in a pilot program.

Question 22

Question: All of the following are considered to be guidelines that an experienced instructor would follow when presenting a safety training program EXCEPT:

- a. Do not stay physically close to your listeners.
- b. Get rid of professional terminology.
- c. Remember that trainees tend to remember narrative chunks more than sophisticated information.
- d. Appear to have fun, even be theatrical, if necessary.

Correct Answer: Select (a)
Explanation: It is a good idea to stay physically close to the trainees while making a presentation. Also, it is helpful to place the information being presented in a larger, and interesting context. It is important to deliver only the quantity of material that the trainees need to know.

Question 23

Question: Which of the following statements is NOT true in regard to presenting safety training materials?

- a. The trainees will be much more open to learning if the instructor is successful in giving them a sense of disequilibrium.
- b. Many educational psychologists believe that disequilibrium (the state of being out of balance) is not essential to learning.
- c. The effectiveness of a safety training presentation depends both on the trainees and the instructor.
- d. It is essential for the instructor to provide motivation to learn.

Correct Answer: Select (b)
Explanation: Statements (a), (c), and (d) are all true in regard to safety training presentation. Many educational psychologists believe that bringing a state of "out of balance" to trainees is essential to learning.

It is also important for the instructor to rehearse the presentation. Being positive and showing enthusiasm, speaking loud enough so everyone can hear, and making eye contact with trainees are among other factors that contribute to effective presentations.

Question 24

Question: The first step in developing a safety training program is to conduct a needs assessment. "Needs assessment" refers to the process of determining if a safety training program is needed. Several techniques can be used to conduct a needs assessment. These include observation of employees performing the job, use of questionnaires, studying technical records and manuals, and interviewing subject matter experts. There are both advantages and disadvantages associated with different methods of needs assessment. All of the following are considered to be advantages of the "use of questionnaires" method of needs assessment EXCEPT:

- a. Cost
- b. Can collect data from a large number of persons
- c. Possible low return rates
- d. The data collected can be easily summarized

Correct Answer: Select (c)
Explanation: Possible low return rates or inappropriate responses is one of the disadvantages of using questionnaires to conduct a needs assessment for safety training. This method is also time consuming and, in general, lacks detail.

Question 25

Question: One of the methods used in conducting a needs assessment for safety training programs is to interview experts in the subject matter. All of the following are considered to be disadvantages of using this method to conduct a needs assessment EXCEPT:

- a. It is time-consuming
- b. It can uncover details of training needs
- c. It is difficult to analyze
- d. It needs skilled interviewer

Correct Answer: Select (b)
Explanation: One of the advantages of the interview method of conducting needs assessment for a safety training program is that it is good at uncovering the detailed of training needs, as well as causes and solutions of problems.

Question 26

Question: One of the methods used in conducting a needs assessment for a safety training program is to read technical records and manuals. All of the following are considered to be advantages of using this method of needs assessment EXCEPT:

- a. Good source of information on procedure
- b. Objectivity
- c. Good source of task information for new jobs
- d. Materials may be obsolete

Correct Answer: Select (d)
Explanation: Another disadvantage of using this method of conducting needs assessment for a safety training program is that one may be unable to understand the technical language.

Question 27

Question: The needs assessment process for determining whether a safety training program is needed is comprised of three factors; organizational analysis, person analysis, and task analysis. All of the following are factors that needs to be considered in organizational analysis EXCEPT:

- a. Reasoning ability of the trainer
- b. The company's strategic direction
- c. Managers' and peers' support for training activities
- d. The training resources available

Correct Answer: Select (a)
Explanation: Observation, use of questionnaires, studying technical manuals and records, and interviewing subject matter experts are different techniques used for the needs assessment process. Statements (b), (c), and (d) are factors that need to be considered in organizational analysis.

Question 28

Question: Research has shown that cognitive ability has a considerable amount of influence on learning and on job performance. Cognitive ability includes three dimensions. All of the following are considered to be a dimension of cognitive ability EXCEPT:

- a. Verbal comprehension
- b. Quantitative ability
- c. Attitudes and motivation
- d. Reasoning ability

Correct Answer: Select (c)
Explanation: Attitudes and motivations are not considered to be one of the three dimensions of cognitive ability.

Cognitive ability can be measured by certain tests. Cognitive ability tests assess abilities involved in thinking (for example, reasoning, perception, memory, verbal and mathematical ability, and problem solving). Such tests pose questions designed to estimate applicants' potential to use mental processes to solve work-related problems or to acquire new job knowledge.

Question 29

Question: Learning can be viewed as a relatively permanent change in an individual's capabilities that is not related to the growth process. These capabilities can be related to specific learning outcomes. All of the following are examples of types of learning outcomes EXCEPT:

- a. Verbal information
- b. Objectives
- c. Motor skills
- d. Attitudes

Correct Answer: Select (b)
Explanation: Other examples of learning outcomes are intellectual skills and cognitive strategies. Trainee learning outcomes must be measurable, specific, practical, meaningful, and consistent.

Question 30

Question: Learning is a relatively permanent change in an individual's capabilities that is not related to the growth process. These capabilities are related to specific learning outcomes. Examples of learning outcomes are verbal information, intellectual skills, motor skills, attitude, and cognitive strategies. Which of the following capabilities is related to the cognitive strategies learning outcome?

- a. Manage one's own thinking and learning process
- b. Choose a personal course of action
- c. State, tell, or describe previously stored information
- d. Execute a physical action with precision and timing

Correct Answer: Select (a)
Explanation: Statement (b) is related to the attitudes learning outcome, statement (c) is related to the verbal information learning outcome, and statement (d) is related to the motor skills learning outcome.

Question 31

Question: Several learning theories have been proposed that relate to how we learn. All of the following are examples of learning theories EXCEPT:

- a. Reinforcement theory
- b. Social learning theory
- c. Goal setting theory
- d. Participative management theory

Correct Answer: Select (d)
Explanation: Other proposed learning theories are the need theory, the expectancy theory, the adult learning theory, and the information processing theory.

The goal setting theory emphasizes setting goals that are specific, measurable, achievable, realistic, and time-targeted (SMART). This theory states that individuals in a group that has a common goal must clearly understand what is expected from them.

The adult learning theory focuses on the following:

- Adults in general want to have a reason why they should learn.
- Adults use their own experiences to assist in their learning process.
- New social rules determine the readiness of adults to learn.
- Adults generally have a desire to apply what they have learned to problem solving.

The expectancy theory states that individuals can be motivated to learn if they have certain expectations.

The information processing theory is a cognitive processing theory. It focuses on how the mind functions. Learning elements such as rehearsal are associated with this theory, but emphasis is placed on how information is processed.

The need theory explains the amount of value that a person places on certain outcomes.

Reinforcement theory states that learners choose or avoid certain actions or behavior based on the consequences that are expected. Choices that led to positive consequences in the past have a tendency to be repeated, while those actions that resulted in a negative consequence in the past are avoided.

The social learning theory, developed by Albert Bandura, focuses on observing the attitudes, behaviors, and emotional reactions of others. This learning theory emphasizes learning by observation, and considers that "we learn from each other."

Question 32

Question: Reinforcement theory is one of the several proposed learning theories. Which of the following statements BEST describes the "reinforcement theory"?

- a. Emphasizes that people learn by observing other individuals who, in their opinion, are knowledgeable and credible.
- b. Assumes that an individual's behavior is the outcome of the person's conscious goals and intentions.
- c. Emphasizes that the past outcomes of certain behaviors can motivate people to perform or avoid certain behaviors.
- d. Explains the amount of value that a person places on certain outcomes.

Correct Answer: Select (c)
Explanation: Statement (a) is a description of social learning theory, statement (b) is a description of the goal setting theory, and statement (d) is a description of need theories.

Question 33

Question: Which of the following statements BEST describes the information processing theory of learning?

- a. Suggests that an individual's behavior is based on expectancy, instrumentality, and valence
- b. Suggests that the orientation to learning must be problem-centered instead of subject-centered
- c. Suggests that the instruction must be based on the learner's interests and competencies
- d. Emphasizes the internal processes that occur when training content is learned and retained

Correct Answer: Select (d)
Explanation: Statement (a) is a description of the expectancy theory of learning. Statements (b) and (c) are both descriptions of the adult learning theory.

Question 34

Question: According to the social learning theory, a person's learning is influenced by his or her self-efficacy. Which of the following statements BEST describes the concept of self-efficacy?

- a. Learners must remember the behavior or skills that they observe.
- b. Behavior modification is a training method that is based on reinforcement.
- c. An individual's judgment about whether he/she can successfully learn knowledge and skills.
- d. A need that motivates a person to behave in a manner to satisfy a deficiency.

Correct Answer: Select (c)
Explanation: Self-efficacy is best described by statement (c). Another way to describe self-efficacy is that it is an individual's belief in his or her ability to succeed in a particular situation.

Question 35

Question: The expectancy theory of learning suggests that three factors are the basis for an individual's behavior. These factors are expectancy, instrumentality and valence. Which of the following statements best describes valence?

- a. The value an individual places on an outcome
- b. Adults have a need to know why they are learning something
- c. Even the best designed training program cannot be successful if employees feel that their job security is threatened
- d. Changes in the intensity or frequency of the stimulus that affect attention

Correct Answer: Select (a)
Explanation: Valence that is one of the factors that can influence an individual's behavior according to the expectancy theory of learning is best described by statement (a).

Question 36

Question: The learning processes can be divided into eight different categories. These are: Expectancy, Perception, Working storage, Semantic encoding, Long-term storage, Retrieval, Generalizing, Gratifying. Which of the following BEST describes semantic encoding?

- a. Refers to the mental state that the learner brings to the instructional process
- b. Refers to the ability to organize the message from the environment so that it can be processed and acted upon
- c. Refers to identifying learned material in long-term memory and using it to influence performance
- d. Relates to short-term memory

Correct Answer: Select (d)
Explanation: Statement (a) is a description of expectancy, statement (b) is a description of perception, and statement (c) is a description of retrieval.

Question 37

Question: Knowing the objectives of a training program greatly helps employees to learn best. A training objective has three components. Which of the following is NOT considered to be a component of a training objective?

- a. A statement to elaborate the amount to be learned
- b. A statement of what the employee's performance is expected to be
- c. A statement of the quality of performance that is acceptable
- d. A statement of the conditions under which the employee is expected to perform the outcome of the learning

Correct Answer: Select (a)
Explanation: Statements in (b), (c), and (d) are components of a training objective. Other examples of training program objectives include, but are not limited to, increasing productivity, better product quality, a better work environment, and improving health and safety.

Question 38

Question: Seating arrangement at the training site must be based on the type of trainee interaction desired and the desired trainee-trainer interaction. All of the following are types of seating arrangements EXCEPT:

- a. Horseshoe
- b. Fan-type
- c. Conference-type
- d. Instructor-student

Correct Answer: Select (d)
Explanation: (a), (b), and (c) are all types of different seating arrangements. Classroom-type is also a type of seating arrangement.

A horseshoe arrangement allows eye contact between the instructor and the trainees. It is ideal when the presentation includes a demonstration and also allows the trainees to have large group discussions.

In fan-type seating, the trainees can see from any point in the room and can easily listen to a presentation as well as engage in group practices.

The conference-type seating arrangement accommodates the most number of trainees per area and is appropriate for lectures and keynoters.

Question 39

Question: All of the following are considered to be advantages of fan-type seating arrangement at a training site EXCEPT:

- a. Allow the trainees to see from any point in the room.
- b. Trainees can easily switch from listening to a presentation to working in teams.
- c. Allows for maximum interaction of trainees with the trainer.
- d. Trainees can communicate easily with everyone in the room.

Correct Answer: Select (c)
Explanation: One of the advantages of classroom-type seating arrangement is that it allows good interaction of the trainer with the trainees.

Question 40

Question: Which of the following should be the first step in the development of a safety training program?

- a. Ensure that qualified instructors are available.
- b. Determine if there is a need for the training.
- c. Set realistic and measurable goals and objectives for the training program.
- d. Ensure that course material meets the objectives of the training program.

Correct Answer: Select (b)
Explanation: The fundamental question that must be answered is whether the training program resolves the needs of the organization.

Question 41

Question: Which of the following is the BEST example of a hazardous waste handling training program?

- a. Regulatory compliance
- b. Storage
- c. Transportation
- d. Students understand and are able to practice the regulatory framework to handle hazardous waste from its point of generation to its ultimate disposal.

Correct Answer: Select (d)
Explanation: A training objective must specifically identify what the students can do at the conclusion of the training program.

Question 42

Question: Which of the following IS NOT true in regard to the multiple choice method of knowledge assessment?

- a. Objectivity
- b. Statistical reliability
- c. Subjectivity
- d. Easy grading

Correct Answer: Select (c)
Explanation: Multiple-choice questions can be graded on a pass/fail basis, and therefore, are very objective (and not subjective).

Multiple choice questions have both advantages and disadvantages. Advantages include easy grading and the minimization of guessing. One of the major disadvantages is that they limit creativity.

Question 43

Question: Which of the following must be considered first, before a decision on computer-based safety training is made?

- a. The type of software to be used
- b. Availability of computers
- c. Internet connection for training at multiple sites
- d. Need analysis

Correct Answer: Select (d)
Explanation: Before a decision on computer-based safety training is made, one must conduct a need analysis to find out if there is a need for such training.

Question 44

Question: Which of the following is the most important thing to do at the completion of a safety-training program?

- a. Measure the class performance by conducting a statistical analysis of student grades.
- b. Review the regulatory portion of the course to ensure that students understand regulatory compliance.
- c. Give a hands-on test to ensure that students can put their knowledge into practice.

- d. Obtain student feedback for continuous improvement.

Correct Answer: Select (d)
Explanation: Obtaining student feedback for continuous improvement of the training program is the most important thing to consider at the completion of the training program.

Question 45

Question: Malcolm Knowles suggests six assumptions about adult learning. The need to know, the learner's self-concept, and the role of learners' experiences are three of these assumptions. All of the following are among assumptions about adult learning EXCEPT:

- a. Readiness to learn
- b. Orientation to learning
- c. Role playing in learning
- d. Motivation

Correct Answer: Select (c)
Explanation: Role playing is a teaching strategy to assist participants in experiencing feelings and participating skills.

Question 46

Question: Which of the following is NOT considered to be a distance learning advantage?

- a. Flexibility
- b. Cost
- c. No commuting
- d. Requires adaptability to new technologies

Correct Answer: Select (d)
Explanation: If a student does not enjoy working with technology, that student will probably get a lot less out of an online course. The student must feel comfortable working with computers and online programs before signing up for a class. In general, online courses offer more flexibility, lower cost, and the advantage of no commuting compared to conventional classroom courses.

Question 47

Question: Bandwidth is an important factor to consider when setting up Internet-based safety training that involves several workstations. Which of the following bandwidths provides the highest signaling speed for Internet-based safety training?

- a. DSL
- b. ADSL
- c. T-1
- d. POTS

Correct Answer: Select (c)
Explanation: T-1, which is a digital transmission link, provides the highest signaling speed for transferring

information across the Internet. Basically, T1 lines are business connections, while cable/DSL services are usually residential.

Question 48

Question: Which of the following provides real-time conferencing and visual exchange?

- a. WebEx
- b. Visio 2006
- c. PowerPoint
- d. All of the above

Correct Answer: Select (a)
Explanation: Cisco WebEx provides real-time conferencing and also provides the capability for real-time visual exchange. WebEx also provides on-demand applications that can enhance different aspects of business processes such as training and sales. Applications are delivered over a global network with a very high level of security.

Question 49

Question: Which of the following is (are) among what participants should learn in an effective safety training program:

- a. How to identify the safety and health problems at their workplace
- b. How to analyze the causes of these safety and health problems
- c. How to bring about safer, healthier workplaces
- d. All of the above

Correct Answer: Select (d)
Explanation: According to OSHA, the other component is how to involve their co-workers in accomplishing all of the above.

Question 50

Question: A general review of training "best practices" reveals four characteristics that sound training programs have in common. Which of the following is NOT one of these four characteristics?

- a. Accurate
- b. Credible
- c. Clear
- d. Principles of adult learning

Correct Answer: Select (d)
Explanation: The fourth characteristic according to OSHA is: Practical. Training programs should present information, ideas, and skills that participants see as directly useful in their working lives. Successful transfer of learning occurs when the participant can see how information presented in a training session can be applied in the workplace.

Question 51

Question: Three kinds of "learning exchanges" should be used during training. Which of the following is NOT one of the three learning exchanges?

- a. Participant-to-Participant
- b. Participant-to-Facilitator
- c. Facilitator-to-Participant
- d. Facilitator-to-Facilitator

Correct Answer: Select (d)
Explanation:

- **Participant-to-Participant:** 'Participant-to-participant' learning exchange recognizes that participants can learn from one another's experiences. Participant-to-participant exchanges should be a key feature of the training.
- **Participant-to-Facilitator:** Facilitators can learn as much from training sessions as participants do. On many subjects, a group of participants may have more extensive knowledge and experience in certain areas than a facilitator.
- **Facilitator-to-Participant:** Classroom learning needs structure. A facilitator's role is to guide discussions, encourage participation, draw out and/or add information as needed, and highlight key issues and points.

Question 52

Question: In regards to the characteristics of adult learners, which of the following statements is incorrect?

- a. Adults are self-motivated.
- b. Adults do not expect to gain information that has immediate application to their lives.
- c. Adults learn best when they are actively engaged.
- d. Adult learning activities are most effective when they are designed to allow students to develop both technical knowledge and general skills.

Correct Answer: Select (b)
Explanation: Adults learn best when they have time to interact, not only with the instructor but also with each other. Adults learn best when asked to share each other's personal experiences at work and elsewhere.

Question 53

Question: An effective safety education environment must have sufficient space for all attendees to sit comfortably during instruction and sufficient room set-up for participants to interact with one another. Which of the following is not one of the most widely used seating arrangement for safety training?

- a. U-Shape
- b. Round tables
- c. Diagonal
- d. Hollow square

Correct Answer: Select (c)
Explanation: Room Layouts That Encourage Participation and Improve Learning include U-Shape, Round Tables, Hollow Square, and Circle.

Question 54

Question: Which of the following is (are) component(s) of an effective safety training program?

- a. Be performance based.
- b. Progress be measurable.
- c. Have an implementation plan.
- d. All of the above.

Correct Answer: Select (d)
Explanation: A sound safety training program must accomplish transfer of knowledge gained to actual work situations, its progress be measurable, and have an implementation plan.

Question 55

Question: Threshold Limit Values (TLVs) are published by which of the following organizations?

- a. OSHA
- b. EPA
- c. ACGIH
- d. ANSI

Correct Answer: Select (c)
Explanation: The American Conference of Governmental Industrial Hygienists (ACGIH) publishes the TLVs. TLVs are airborne concentration of chemicals that a worker may be exposed to eight hours a day over a working lifetime without any adverse health effects. OSHA publishes the Permissible Exposure Limits (PELs).

Question 56

Question: Adults can best learn when they _____ something.

- a. Observe
- b. Do
- c. Read
- d. Listen to

Correct Answer: Select (b)
Explanation: Adults learn best when they DO something.

Question 57

Question: All of the followings are considered to be adult learning theories EXCEPT:

- a. Cognitive
- b. Psychometric
- c. Behavioral

- d. Motivational

Correct Answer: Select (b)
Explanation: The cognitive theory addresses how information is processed and remembered. Behavioral theory deals with the fact that knowledge is a repertoire of behavioral responses to environmental stimuli. Motivational theory deals with how people learn when there is a motivation for learning.

Question 58

Question: All the following are advantages of online training EXCEPT:

- a. Flexibility
- b. Cost
- c. Internet
- d. Networking opportunities

Correct Answer: Select (c)
Explanation: Benefits of Online training include:

- Flexibility: Students have the freedom to juggle their careers and school because they aren't tied down to a fixed schedule.
- Reduced Costs: Online education can cost less due to a variety of reasons.
- Networking Opportunities.
- Documentation.
- Increased Instructor - Student Time.
- Access to Expertise.
